DETAILED ACTION

Information Disclosure Statement

1. The Examiner has considered the information disclosure statement (IDS) submitted on 5/26/06.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-3 and 5-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Harris et al. (7,002,325).

Harris et al. disclose a clocked cascading current mode regulator with high noise immunity and arbitrary phase count in Figs. 1-3. In Fig. 1, a switch controller (105), the switch controller to receive a first control signal (PHASE) and responsively generate a drive signal (UGATE and LGATE) operable to enable a power switch (Q1 and Q2) and to receive a second control signal (BOOT) and responsively generate the drive signal

Art Unit: 2838

operable to disable the power switch (Q1 and Q2) wherein the first control signal and the second control signal are representative of a PWM drive signal and forming the switch controller to generate a control output responsively to the first control signal and the second control signal. A third control signal (PH_IN/PH_OUT). See col. 4, line 21 to col. 5, line 55.

Response to Arguments

4. Applicant's arguments with respect to claims 1-3 and 5-20 have been considered but are moot in view of the new ground(s) of rejection.
